Yosef Ayman Ahmed

Junior Backend Developer

PHP • Laravel • Python • Django • Golang

Giza, Egypt | +201025512377 | yosefaymanahmedya@gmail.com

LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Junior Backend Developer and third-year Computer Science student at Cairo University, with hands-on experience building backend applications and RESTful APIs using PHP/Laravel, Python/Django, and Golang. Strong foundation in database design, authentication, authorization, and software architecture. Interested in understanding business requirements and translating them into complete, well-structured systems rather than implementing isolated features. Focused on building reliable, maintainable applications with attention to data consistency, security, and the interaction between system components.

EDUCATION

Faculty of Computers and Artificial Intelligence, Cairo University

Bachelor's Degree in Computer Science *August 2024 - Present*

Third-Year Student | Cairo, Egypt

TECHNICAL SKILLS

Languages: PHP, Python, Go, SQL

Backend Frameworks: Laravel, Laravel Sanctum, Django, Django REST Framework, Gin, Chi, GORM, RESTful APIs

Backend Engineering: API Design, MVC, OOP, SOLID Principles, Service Layer, Middleware, Request Validation, Authentication, Authorization, Business Logic Implementation

Databases: MySQL, PostgreSQL, SQLite, Relational Database Design, Normalization, Complex SQL Queries, Migrations, Database Relationships

Tools & Workflow: Git, GitHub, Postman, Jira, ClickUp, Composer, Linux (Ubuntu)

PROJECTS

Teacher System - Educational Management SaaS *In Development*

PHP, Laravel, PostgreSQL, MySQL, Inertia.js, Blade

- Developing a multi-tenant educational SaaS platform that enables teachers to manage courses, students, attendance, quizzes, assignments, and educational content.
- Designed normalized relational database schemas and service-layer workflows for enrollment, wallet transactions, and access control.
- Implementing backend business logic using Eloquent ORM, Form Requests, Policies, Events, and model relationships, following SOLID principles.

ICPC FCAI CU Community - Training Management Platform *Deployed*

Python, Django, PostgreSQL, Tailwind CSS v4

- Developed a platform for managing competitive programming levels, training waves, and live sessions for the ICPC FCAI CU community.
- Designed interconnected data models for levels, training periods, and sessions, with dynamic scheduling for current waves and upcoming sessions.
- Built staff content management workflows and server-rendered pages, with SEO support including structured data, canonical URLs, and Open Graph metadata.

GitHub Repository | Live Website

Budgetary - Personal Finance Management Platform

Python, Django REST Framework, PostgreSQL, MySQL, JWT

- Built a financial management application with a Django REST Framework backend and React frontend.
- Developed RESTful APIs with JWT-based authentication and authorization.
- Designed relational database structures for expense tracking and account management.

Jobify - Job Portal

Python, Django, PostgreSQL, MySQL

- Developed a job portal supporting multiple user roles, including job seekers and employers.

- Implemented backend functionality for job listings, applicant tracking, and user profile management.
